Class 6 Science – Chapter 3: Mindful Eating: A Path to a Healthy Body

Complete Question–Answer Notes | Simple English | CBSE

These notes are based on your uploaded 13-page chapter PDF. They cover the textbook activities, important questions from each topic, food nutrients, food tests, balanced diet and deficiency diseases. The answers use simple English for Class 6 students.

03-mindful-eating-a-path-to-a-healthy-body.pdf

1. All questions and answers from the textbook

A. Food We Eat — Page 1

Q1. What food items do you eat during breakfast, lunch and dinner?

Answer:

- Breakfast: Milk, bread, eggs, poha or chapati.
- Lunch: Rice, dal, chapati, vegetables and curd.
- Dinner: Chapati, rice, vegetables and dal.

These are sample answers. Students can write the food they actually eat.

B. Food Items Eaten During the Day — Page 2

Q2. Make a list of food items eaten by three classmates during breakfast, lunch and dinner.

Answer: The following is a sample table.

Name	Breakfast	Lunch	Dinner
Ananya	Milk and bread	Rice, dal and vegetables	Chapati and vegetables
Rahul	Poha and milk	Chapati, dal and curd	Rice and vegetables
Sanya	Eggs and bread	Rice, dal and salad	Chapati and dal

C. Think and Answer — Page 3

Q3. What will happen to a human being if he does not eat food for a few days?

Answer: A person may become weak, tired and dizzy. The body will start using stored energy. Prolonged lack of food can cause serious health problems and may become life-threatening.

D. Think and Answer — Page 4

Q4. Do you think processed foods like jellies and jams contain preservatives? Give a reason for your answer.

Answer: Yes, some processed foods like jams and jellies contain preservatives. Preservatives help prevent spoilage and increase shelf life. However, not all jams and jellies contain added preservatives; some are preserved using sugar, acidity and proper processing.

E. Think and Answer — Page 5

Q5. Why is starch present in food?

Answer: Starch is a carbohydrate. It provides energy to our body. Foods such as rice, potatoes, wheat and bread contain starch.

Q6. What does a blue-black colour indicate in the iodine test?

Answer: A blue-black colour indicates the presence of starch in a food sample.

F. Think and Answer — Page 6

Q7. What harm can obesity cause to a person?

Answer: Obesity can increase the risk of health problems such as heart disease, high blood pressure and type 2 diabetes. It can also make physical activities more difficult.

G. Think and Answer — Page 8

Q8. Why is morning considered the best time to get sunlight?

Answer: Morning sunlight can help the body produce vitamin D. It is also generally cooler than the strong midday sun. However, vitamin D production depends on the season, location, skin type and time spent outdoors.

H. Quick Check — Page 9

Q9. Name the following.

1. Five nutrients: Carbohydrates, fats, proteins, vitamins and minerals.
2. Two nutrients that provide a lot of energy: Carbohydrates and fats.
3. Two sources of protective foods: Fruits and vegetables.
4. Two sources of minerals: Milk and green leafy vegetables.

I. Study the Diets — Page 10

The textbook compares two diets.

Q10. Which of the given diets is healthy?

Answer: Diet B is healthier because it includes breakfast, fruits, vegetables, pulses, rice, chapatis and milk. It provides a better variety of nutrients than Diet A.

Q11. Which diet resembles your daily eating pattern?

Answer: My daily eating pattern resembles Diet B because I eat regular meals and include fruits, vegetables, pulses and other nutritious foods.

Students should change this answer according to their own eating habits.

Q12. Describe your daily eating pattern.

Answer: I eat breakfast in the morning, lunch in the afternoon and dinner in the evening. I try to include cereals, pulses, vegetables, fruits and milk in my diet. I avoid eating too much junk food.

2. Important questions and answers from every topic

Topic 1: Food and its importance

Q13. What is food?

Answer: Food is a substance that provides energy and nutrients to living organisms for growth, development and survival.

Q14. Why do living organisms need food?

Answer: Living organisms need food:

1. To perform different activities.
2. To protect the body from diseases and keep it healthy.
3. To repair injured body parts.
4. To grow and develop.
5. To reproduce.

Q15. What is food variety?

Answer: Food variety means the different types of foods that people eat. Different people and regions may have different food habits.

Q16. Why should we eat different kinds of food?

Answer: Different foods contain different nutrients. Eating a variety of foods helps the body obtain all the nutrients it needs.

Topic 2: Food Ingredients

Q17. What are food ingredients?

Answer: Food ingredients are the materials used to prepare a food item.

Q18. Give examples of food ingredients.

Answer: Rice, pulses, vegetables, salt, oil, spices and sugar are examples of food ingredients.

Q19. Do all food items contain the same ingredients?

Answer: No. Different food items contain different ingredients. For example, a fruit salad may contain fruits, while dal contains pulses, water and spices.

Topic 3: Nutrients in Food

Q20. What are nutrients?

Answer: Nutrients are useful substances present in food that provide energy and materials needed by the body for growth, repair and proper functioning.

Q21. Name the five main groups of nutrients mentioned in the chapter.

Answer:

1. Carbohydrates
2. Fats
3. Proteins
4. Vitamins
5. Minerals

Water and dietary fibre are also essential components of a healthy diet.

Q22. How are nutrients classified according to their functions?

Answer: Nutrients are broadly grouped according to their roles as energy-giving foods, body-building foods and protective foods.

Q23. What are energy-giving foods? Give examples.

Answer: Energy-giving foods provide energy for daily activities. Rice, bread, potatoes, sugar and oils are examples.

Q24. What are body-building foods? Give examples.

Answer: Body-building foods help the body grow and repair tissues. Pulses, beans, milk, eggs, fish and meat are examples.

Q25. What are protective foods? Give examples.

Answer: Protective foods supply vitamins and minerals that help keep the body healthy and protect it from deficiency diseases. Fruits and vegetables are examples.

Topic 4: Carbohydrates

Q26. What are carbohydrates?

Answer: Carbohydrates are nutrients that provide energy to the body.

Q27. Name two types of carbohydrates mentioned in the chapter.

Answer: The two types are sugars and starch.

Q28. Give five examples of carbohydrate-rich foods.

Answer: Rice, bread, potatoes, wheat and bananas.

Q29. What happens to starch during digestion?

Answer: During digestion, starch is broken down into simpler sugars, such as glucose, which the body can absorb and use for energy.

Q30. What is glucose?

Answer: Glucose is a simple sugar that provides energy to the body's cells.

Topic 5: Testing for Starch and Simple Sugars

Q31. How can we test for starch in a food sample?

Answer: Add a few drops of iodine solution to the food sample. If it turns blue-black, starch is present.

Q32. What materials are needed for the iodine test?

Answer: A food sample, such as potato or bread, iodine solution and a bowl or test container.

Q33. How can we test for glucose using Benedict's solution?

Answer: Add Benedict's solution to a prepared food sample and heat it carefully. A change from blue to green, yellow, orange or brick-red indicates the presence of reducing sugars. The colour depends on their concentration.

Q34. Why must heating during the Benedict's test be done carefully?

Answer: The test tube and liquid become hot. Careful heating helps prevent burns and accidents. It should be performed under adult or teacher supervision.

Topic 6: Fats

Q35. What are fats?

Answer: Fats are nutrients that provide energy, store energy and help keep the body warm.

Q36. Name some fat-rich foods.

Answer: Butter, ghee, oils, nuts, seeds, cheese and some meats are sources of fats.

Q37. What are saturated and unsaturated fats?

Answer: Saturated and unsaturated fats are two types of fats. Saturated fats are commonly found in butter, ghee and some animal fats. Unsaturated fats are found in many plant oils, nuts and seeds.

Q38. How can we test for fat in a food sample?

Answer: Rub the food sample on a piece of paper and let it dry. A lasting translucent, oily spot indicates the presence of fat.

Q39. Why should we not eat excessive amounts of fat?

Answer: Excessive fat intake can contribute to weight gain and increase the risk of certain health problems. The body needs some fat, but it should be eaten in appropriate amounts.

Topic 7: Proteins

Q40. What are proteins?

Answer: Proteins are nutrients needed for growth, repair of body tissues and proper body functioning.

Q41. Why are proteins called body-building foods?

Answer: Proteins are called body-building foods because they help build and repair muscles and other body tissues.

Q42. Name some plant sources of proteins.

Answer: Beans, peas, gram, lentils and other pulses are plant sources of proteins.

Q43. Name some animal sources of proteins.

Answer: Eggs, milk, cheese, fish and meat are animal sources of proteins.

Q44. What may happen due to a lack of protein in the diet?

Answer: Protein deficiency may cause poor growth, muscle wasting, weakness and other health problems. Severe deficiency can lead to diseases such as kwashiorkor.

Q45. How can we test for proteins in a food sample?

Answer: In the test described in the chapter, copper sulphate solution and sodium hydroxide solution are added to the food sample. A violet or purple colour indicates the presence of protein.

Topic 8: Vitamins

Q46. What are vitamins?

Answer: Vitamins are nutrients needed in small amounts for normal growth, health and proper functioning of the body.

Q47. Why are vitamins important?

Answer: Vitamins help maintain healthy eyes, skin, bones, teeth, gums and other body systems. They also help protect the body from deficiency diseases.

Q48. What are the two main types of vitamins?

Answer:

- Fat-soluble vitamins: A, D, E and K.
- Water-soluble vitamins: Vitamin B group and vitamin C.

Q49. Name some sources of vitamins.

Answer: Carrots, green leafy vegetables, citrus fruits, milk, eggs, fish, nuts and seeds provide different vitamins.

Q50. What is vitamin A important for?

Answer: Vitamin A helps maintain healthy eyes and skin. Its deficiency can cause night blindness.

Q51. What is vitamin B_1 important for?

Answer: Vitamin B_1 helps the body release energy from food. Its deficiency can cause beriberi.

Q52. What is vitamin B_{12} important for?

Answer: Vitamin B_{12} helps form healthy red blood cells and supports the nervous system. Its deficiency can cause certain types of anaemia and neurological problems.

Q53. What is vitamin C important for?

Answer: Vitamin C helps keep the gums and skin healthy and supports wound healing. Its deficiency can cause scurvy.

Q54. What is vitamin D important for?

Answer: Vitamin D helps the body absorb calcium and supports healthy bones and teeth. Its deficiency in children can cause rickets.

Q55. What is vitamin E important for?

Answer: Vitamin E helps protect body cells from damage and supports normal body functions.

Q56. What is vitamin K important for?

Answer: Vitamin K helps blood clot normally. Its deficiency can cause excessive bleeding.

Topic 9: Minerals

Q57. What are minerals?

Answer: Minerals are nutrients needed in small amounts for healthy bones, teeth, blood and other body functions.

Q58. What are macrominerals and trace minerals?

Answer: Macrominerals are needed in relatively larger amounts, while trace minerals are needed in very small amounts.

Q59. Name some important minerals.

Answer: Calcium, sodium, potassium, phosphorus, iron, iodine and fluorine are important minerals discussed in the chapter.

Q60. What is calcium important for?

Answer: Calcium helps build strong bones and teeth and supports normal muscle and nerve function.

Q61. What is iron important for?

Answer: Iron helps the body make haemoglobin, which carries oxygen in the blood. Iron deficiency can cause anaemia.

Q62. What is iodine important for?

Answer: Iodine is needed for the proper functioning of the thyroid gland. Its deficiency can cause goitre.

Q63. What is fluorine important for according to the chapter?

Answer: Fluoride helps strengthen tooth enamel and protect teeth against decay.

Q64. Name foods rich in calcium and iron.

Answer: Milk and green leafy vegetables are sources of calcium. Pulses, beans, meat and green leafy vegetables provide iron.

Topic 10: Dietary Fibre and Water

Q65. What is dietary fibre?

Answer: Dietary fibre, also called roughage, is the part of plant foods that is not fully digested by the human body.

Q66. Why is dietary fibre important?

Answer: Dietary fibre supports digestion and helps prevent constipation by promoting regular bowel movements.

Q67. Name some sources of dietary fibre.

Answer: Whole grains, fruits, vegetables and pulses are good sources of dietary fibre.

Q68. Why is water important for our body?

Answer: Water helps transport nutrients, remove wastes, regulate body temperature and support many body functions.

Q69. What is dehydration?

Answer: Dehydration occurs when the body loses more water than it takes in.

Q70. What are the symptoms of dehydration?

Answer: Symptoms may include thirst, tiredness, dizziness, weakness and reduced urination. Severe dehydration can be dangerous.

Q71. How can dehydration be prevented?

Answer: Drink enough safe water, especially in hot weather and during physical activity. Oral Rehydration Solution (ORS) can help replace water and salts lost during diarrhoea or vomiting.

Topic 11: Categorisation of Food on the Basis of Its Role

Q72. How can food be classified according to its role in the body?

Answer: Food can be classified into three main groups:

1. Energy-giving foods.
2. Body-building foods.
3. Protective foods.

Q73. Why should we eat foods from all three groups?

Answer: We should eat foods from all three groups because the body needs energy, materials for growth and repair, and nutrients that support health.

Q74. Give two examples of each group.

Answer:

Food group	Examples
Energy-giving	Rice, bread
Body-building	Pulses, eggs
Protective	Fruits, vegetables

Topic 12: Balanced Diet

Q75. What is a balanced diet?

Answer: A balanced diet contains all the essential nutrients, water and dietary fibre in suitable amounts to support growth and maintain good health.

Q76. Why is a balanced diet important?

Answer: A balanced diet provides energy, supports growth and repair, helps maintain health and reduces the risk of nutrient deficiencies.

Q77. Is the same diet suitable for everyone?

Answer: No. Dietary needs differ according to age, sex, activity level, health and other factors.

Q78. Why do children need a nutritious diet?

Answer: Children need a nutritious diet because their bodies are growing and developing rapidly.

Q79. Why may people doing hard physical work need more energy?

Answer: People doing hard physical work use more energy, so they may need more energy-giving foods to meet their needs.

Q80. What are healthy eating habits?

Answer: Healthy eating habits include eating a variety of nutritious foods, eating regular meals, drinking enough water, limiting excessive junk food and maintaining appropriate portion sizes.

Topic 13: Deficiency Diseases

Q81. What are deficiency diseases?

Answer: Deficiency diseases are health problems that develop when the body does not receive enough of one or more essential nutrients over time.

Q82. How can deficiency diseases be prevented?

Answer: Many deficiency diseases can be prevented by eating a balanced and varied diet that supplies the nutrients the body needs.

Q83. What is the effect of carbohydrate deficiency?

Answer: A lack of sufficient carbohydrates and total energy can cause weakness, tiredness and reduced stamina.

Q84. What is the effect of protein deficiency?

Answer: Protein deficiency can cause poor growth, muscle wasting, weakness and swelling in severe cases.

Q85. What is kwashiorkor?

Answer: Kwashiorkor is a severe form of malnutrition associated with inadequate protein intake and other dietary or health factors. It may cause swelling, poor growth and changes in the skin and hair.

Q86. What is marasmus?

Answer: Marasmus is a severe form of malnutrition caused by a prolonged lack of sufficient energy and nutrients. It can cause extreme thinness, weight loss and muscle wasting.

Q87. What is anaemia?

Answer: Anaemia is a condition in which the blood has too little haemoglobin or too few healthy red blood cells. Iron deficiency is one common cause.

Q88. What is rickets?

Answer: Rickets is a disease in children in which developing bones become weak and soft, commonly due to vitamin D deficiency.

Q89. What is scurvy?

Answer: Scurvy is a disease caused by vitamin C deficiency. It may cause swollen or bleeding gums and poor wound healing.

Q90. What is night blindness?

Answer: Night blindness is difficulty seeing in dim light. Vitamin A deficiency is one possible cause.

Q91. What is goitre?

Answer: Goitre is an enlargement of the thyroid gland. Iodine deficiency is one possible cause.

Q92. What is beriberi?

Answer: Beriberi is a disease caused by vitamin B_1 (thiamine) deficiency. It can affect the nerves and muscles.

Q93. What is dehydration?

Answer: Dehydration is a condition in which the body loses too much water. It can cause thirst, weakness and dizziness.

3. Important deficiency diseases and their sources

The tables on pages 11–13 of the textbook give the functions, deficiency diseases, symptoms and food sources of vitamins and minerals. The following tables summarise those topics for revision.

03-mindful-eating-a-path-to-a-healthy-body.pdf

A. Vitamins and deficiency diseases

Vitamin	Main function	Deficiency disease or problem	Food sources
Vitamin A	Keeps eyes and skin healthy	Night blindness	Carrots, green leafy vegetables, tomatoes
Vitamin B_1	Helps release energy	Beriberi	Cereals, peas, potatoes, yeast
Vitamin B_{12}	Helps form red blood cells	Certain types of anaemia	Meat, liver, fish, milk
Vitamin C	Keeps gums healthy and helps healing	Scurvy	Citrus fruits, tomatoes
Vitamin D	Helps build strong bones and teeth	Rickets	Sunlight, milk, fish, eggs
Vitamin E	Protects cells and supports body functions	Deficiency is uncommon	Vegetable oils, nuts and seeds
Vitamin K	Helps blood clot	Excessive bleeding	Spinach, cabbage, eggs

B. Minerals and deficiency diseases

Mineral	Main function	Deficiency problem	Food sources
Calcium	Builds strong bones and teeth	Weak bones and teeth	Milk, cheese, green vegetables
Sodium and potassium	Help maintain water balance and normal body functions	Weakness and muscle problems in some cases	Salt and many foods
Phosphorus	Helps build bones and teeth	Weak bones in severe deficiency	Milk, cheese, potatoes, meat
Iron	Helps form haemoglobin	Anaemia	Pulses, cereals, meat, green vegetables
Iodine	Helps the thyroid gland work properly	Goitre	Seafood, iodised salt
Fluoride	Strengthens tooth enamel	Increased risk of tooth decay	Fluoridated water, tea and some foods

Note: Deficiency diseases can have several causes. A symptom alone cannot confirm a nutrient deficiency.

4. Practical activities and food tests

These activities are explained in the textbook's laboratory sections.

Activity 1: Test for starch

Materials: Potato or bread sample, iodine solution and a container.

Procedure:

1. Take a small amount of the food sample.
2. Add two or three drops of iodine solution.
3. Observe the colour.

Observation: The sample turns blue-black if starch is present.

Conclusion: A blue-black colour indicates starch.

Activity 2: Test for glucose

Materials: Sugar solution, Benedict's solution and a test tube.

Procedure:

1. Take some prepared sugar solution in a test tube.
2. Add Benedict's solution.
3. Heat carefully under teacher supervision.

Observation: The blue solution may turn green, yellow, orange or brick-red, depending on the amount of reducing sugar.

Conclusion: The colour change indicates the presence of reducing sugars.

Activity 3: Test for fat

Materials: Food sample and white paper.

Procedure:

1. Rub the food sample on white paper.
2. Allow the paper to dry.
3. Hold it against a light source.

Observation: A lasting translucent, oily spot indicates fat.

Conclusion: The food sample contains fat.

Activity 4: Test for protein

Materials: Food sample, copper sulphate solution and sodium hydroxide solution.

Procedure:

1. Place the prepared food sample in a test tube.
2. Add the reagents as instructed by the teacher.
3. Observe the colour change.

Observation: A violet or purple colour indicates protein.

Conclusion: The food sample contains protein.

5. Additional important long-answer questions

Q94. Explain the importance of nutrients in our body.

Answer: Nutrients are essential for good health. Carbohydrates and fats provide energy. Proteins help in growth and repair of body tissues. Vitamins and minerals support normal body functions and protect us from deficiency diseases. Water and dietary fibre also help the body function properly. Therefore, we should eat a balanced diet.

Q95. Explain the difference between energy-giving, body-building and protective foods.

Answer:

- Energy-giving foods provide energy for daily activities. Examples are rice, bread and potatoes.
- Body-building foods help the body grow and repair tissues. Examples are pulses, milk and eggs.
- Protective foods provide vitamins and minerals that help maintain health. Examples are fruits and vegetables.

Q96. Explain why a balanced diet is important for children.

Answer: A balanced diet provides children with the nutrients needed for growth, bone development, learning and physical activities. It helps maintain good health and prevents many nutrient deficiencies. Children should eat a variety of foods in suitable amounts.

Q97. What is the difference between malnutrition and a deficiency disease?

Answer: Malnutrition occurs when a person's diet does not provide the right amount or balance of energy and nutrients. A deficiency disease is a health condition caused by a lack of a particular essential nutrient or nutrients. Deficiency diseases are one possible result of malnutrition.

Q98. How can we maintain healthy eating habits?

Answer:

1. Eat a variety of foods.

2. Include fruits and vegetables in daily meals.
3. Eat cereals and pulses.
4. Include suitable sources of protein.
5. Drink enough safe water.
6. Limit excessive salt, sugar and unhealthy fats.
7. Eat regular meals and avoid overeating.

Q99. What is the difference between fat-soluble and water-soluble vitamins?

Answer: Fat-soluble vitamins dissolve in fat and include vitamins A, D, E and K. Water-soluble vitamins include vitamin C and the B-group vitamins. The body stores some fat-soluble vitamins, while many water-soluble vitamins need regular dietary intake.

Q100. Why should we not depend only on junk food?

Answer: Junk food may contain too much salt, sugar or unhealthy fats and may not provide all the nutrients required by the body. Eating it too often can displace nutritious foods and contribute to health problems. A varied, balanced diet is a better choice.

6. Multiple-choice questions (MCQs)

Chapter practice quiz

0/15 answered

Choose one answer for each question. Check your answers when you finish.

1. Which nutrient is the main source of energy for the body?

A. Carbohydrates
B. Vitamins
C. Minerals
D. Water

2. Which nutrient helps in growth and repair of body tissues?

A. Protein
B. Water
C. Fibre
D. Salt

3. Which food group provides vitamins and minerals?

A. Protective foods
B. Only sugary foods

C. Only oils
D. Only sweets

4. Which colour indicates starch in the iodine test?

A. Blue-black
B. Pink
C. Green only
D. White

5. Which solution is used in the textbook's glucose test?

A. Benedict's solution
B. Iodine only
C. Salt water
D. Oil

6. Which nutrient provides concentrated energy?

A. Fat
B. Water
C. Vitamin C
D. Fibre

7. Which vitamin deficiency may cause night blindness?

A. Vitamin A
B. Vitamin C
C. Vitamin K
D. Vitamin E

8. Which vitamin deficiency causes scurvy?

A. Vitamin C
B. Vitamin D
C. Vitamin A
D. Vitamin K

9. Which vitamin helps calcium absorption and bone health?

A. Vitamin D
B. Vitamin C
C. Vitamin K
D. Vitamin B_1

10. Which mineral is needed to form haemoglobin?

A. Iron
B. Iodine
C. Fluoride
D. Sodium

11. Iodine deficiency may cause which disease?

A. Goitre
B. Scurvy
C. Beriberi
D. Night blindness

12. Which food is a good source of dietary fibre?

A. Whole grains
B. Only sugar
C. Cooking oil
D. Butter

13. What is dehydration?

A. Loss of too much water from the body
B. Excessive growth
C. A type of vitamin
D. A type of carbohydrate

14. Which is an example of a body-building food?

A. Pulses
B. Sugar
C. Cooking oil
D. Candy

15. Which diet is generally healthier?

A. A varied diet with fruits, vegetables and pulses
B. A diet of only sweets
C. Skipping all meals
D. Eating only fried snacks
Check answers

7. Fill in the blanks

1. Food provides energy and nutrients to the body.
2. Carbohydrates are an important source of energy.
3. Proteins help in growth and repair.

4. Vitamins and minerals help maintain good health.
5. Iodine solution turns blue-black in the presence of starch.
6. Fats provide energy and help keep the body warm.
7. Dietary fibre is also called roughage.
8. A diet containing all essential nutrients in suitable amounts is called a balanced diet.
9. Vitamin C deficiency causes scurvy.
10. Vitamin D deficiency in children may cause rickets.
11. Iron deficiency can cause anaemia.
12. Iodine deficiency may cause goitre.
13. Excessive loss of water from the body causes dehydration.
14. The body needs water for temperature regulation and the removal of wastes.
15. Kwashiorkor is a severe form of malnutrition associated with inadequate protein intake.

8. True or False

Statement	Answer
1. Food provides energy to the body.	True
2. Proteins help repair body tissues.	True
3. All food items contain exactly the same nutrients.	False
4. Iodine solution is used to test for starch.	True
5. Fats provide no energy.	False
6. Fruits and vegetables can provide vitamins and minerals.	True
7. Dietary fibre helps prevent constipation.	True
8. A balanced diet is identical for every person.	False
9. Vitamin C deficiency may cause scurvy.	True
10. Iron is needed for haemoglobin formation.	True
11. Water is not needed if we eat food.	False
12. A healthy diet should include a variety of foods.	True

9. Quick revision before the examination

- Food provides energy, nutrients and materials for growth and repair.
- Carbohydrates and fats are energy-giving nutrients.
- Proteins support growth and tissue repair.
- Vitamins and minerals are needed in small amounts for good health.
- Water helps transport nutrients, regulate temperature and remove wastes.
- Dietary fibre supports digestion and regular bowel movements.
- Iodine solution tests for starch; Benedict's solution tests for reducing sugars.
- A lasting translucent spot on paper indicates fat.
- A violet or purple colour in the protein test indicates protein.
- A balanced diet contains essential nutrients in suitable amounts.
- A varied diet helps prevent many nutrient deficiencies.

- Common deficiency diseases include night blindness, beriberi, scurvy, rickets, anaemia and goitre.
- Dehydration occurs when the body loses more water than it takes in.

These notes cover the main topics and visible textbook activities in the uploaded chapter, along with additional practice questions based on the chapter content.
