Class-6 Chapter 3: Mindful eating A Path to a Healthy Body— Complete Solution NCERT New Syllabus

Complete Question–Answer Notes | Simple English | CBSE

A. Choose the correct answer

1. Which of the following is not an ingredient of idli?

(a) Rice
(b) White lentil
(c) Milk
(d) Water

Answer: (c) Milk

2. Which of the following are called body-building foods?

(a) Proteins
(b) Carbohydrates
(c) Vitamins
(d) Minerals

Answer: (a) Proteins

3. Which of the following is a macromineral?

(a) Zinc
(b) Copper
(c) Calcium
(d) Iodine

Answer: (c) Calcium

4. Which of the following vitamins helps in blood clotting?

(a) Vitamin A
(b) Vitamin C
(c) Vitamin D
(d) Vitamin K

Answer: (d) Vitamin K

5. Which of the following diseases is caused by the deficiency of iron?

(a) Anaemia
(b) Goitre
(c) Rickets
(d) Dental decay

Answer: (a) Anaemia

B. Fill in the blanks

1. There are two types of carbohydrates — sugars and starch.
2. Vitamins are called protective foods.
3. Water does not have any nutritive value but is needed by the body.
4. A balanced diet contains all the nutrients in adequate quantities.
5. Scurvy is a deficiency disease that causes swelling and bleeding of gums.

C. Complete the given table

Deficiency Disease	Nutrient that Lacks	Symptoms
Night blindness	Vitamin A	Difficulty seeing in dim light
Beriberi	Vitamin B1	Weakness and problems with nerves
Anaemia	Iron	Tiredness, weakness and pale skin
Goitre	Iodine	Swelling in the neck
Rickets	Vitamin D	Weak and soft bones; bowed legs

D. Name any four sources of each nutrient

1. Carbohydrates

- Rice
- Wheat
- Potato
- Bread

2. Fats

- Ghee
- Butter
- Cooking oil
- Nuts

3. Vitamins

- Orange

- Carrot
- Spinach
- Amla

4. Minerals

- Milk
- Green leafy vegetables
- Nuts
- Fruits

5. Proteins

- Pulses
- Beans
- Milk
- Eggs

E. Name any two sources of each vitamin

Vitamin	Two Sources
Vitamin A	Carrot, spinach
Vitamin C	Orange, amla
Vitamin K	Spinach, cabbage
Vitamin B12	Milk, eggs
Vitamin D	Egg yolk, fatty fish

F. Name any two sources of each mineral

Mineral	Two Sources
Calcium	Milk, curd
Phosphorus	Milk, fish
Iron	Spinach, beans
Iodine	Iodised salt, sea fish
Fluorine	Drinking water, tea

Page 47 – Crisp and Accurate

A. Define the following terms

1. Food Ingredient

Answer: A food ingredient is any substance used to prepare a food item. For example, rice, lentils, salt and water are ingredients of different dishes.

2. Deficiency Diseases

Answer: Deficiency diseases are diseases caused by a lack of one or more nutrients in our diet. For example, anaemia, rickets and scurvy.

3. Balanced Diet

Answer: A balanced diet is a diet that contains all the essential nutrients, water and dietary fibre in the right amounts.

4. Malnutrition

Answer: Malnutrition is a condition caused by eating too little, too much or an unhealthy balance of nutrients.

5. Obesity

Answer: Obesity is a condition in which a person has excessive body fat. It can increase the risk of diseases such as diabetes and heart problems.

B. Answer the following questions briefly

1. Why do we need food?

Answer: We need food for the following reasons:

- It gives us energy to do daily activities.
- It helps our body grow.
- It repairs damaged body parts.
- It protects us from diseases.
- It keeps our body healthy.

2. Why is the breakdown of carbohydrates important before they are absorbed?

Answer: Carbohydrates are large food molecules. They must be broken down into simple sugars, such as glucose, before they can be absorbed into the blood. The body uses glucose to get energy.

3. How are saturated fats different from unsaturated fats?

Answer:

Saturated Fats	Unsaturated Fats
They are usually solid at room temperature.	They are usually liquid at room temperature.
They are commonly found in butter,	They are commonly found in nuts, seeds and

ghee and fatty meat.	vegetable oils.
Too much intake may increase the risk of heart disease.	They are generally considered healthier when used in place of saturated fats.

4. What is the importance of proteins in our diet?

Answer: Proteins are body-building nutrients. They help our body grow and repair damaged tissues. They also help in making muscles, enzymes and other important body substances.

5. Why is it important to take a balanced diet?

Answer: A balanced diet is important because it provides all the nutrients needed by our body. It gives us energy, helps us grow, repairs body tissues and protects us from deficiency diseases. It also helps us remain healthy and active.

Think and Explain – Long Answer Questions

1. With the help of a lab activity, show the presence of starch in a slice of bread.

Answer:

We can test for the presence of starch in bread by using iodine solution.

Materials Required:

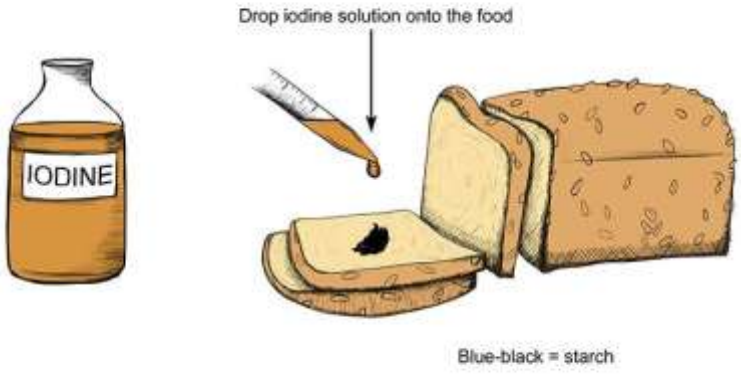

- A slice of bread
- Iodine solution
- A dropper
- A small plate

Procedure:

1. Take a small piece of bread and place it on a plate.
2. Put two or three drops of iodine solution on the bread.
3. Observe the colour of the bread.

Observation: The part of the bread where iodine solution is added turns blue-black.

Conclusion: The blue-black colour shows that starch is present in the bread.

2. What is the importance of vitamins in our diet? How are fat-soluble vitamins different from water-soluble vitamins?

Answer:

Vitamins are protective nutrients that help our body remain healthy. They are needed in small amounts for the proper functioning of the body.

Importance of vitamins:

1. Vitamin A helps us maintain healthy eyes and skin.
2. Vitamin B helps the body release energy from food and supports the nervous system.
3. Vitamin C helps in wound healing and keeps gums healthy.
4. Vitamin D helps the body absorb calcium and keeps bones strong.
5. Vitamin K helps in blood clotting.

Difference between fat-soluble and water-soluble vitamins:

Fat-Soluble Vitamins	Water-Soluble Vitamins
They dissolve in fats.	They dissolve in water.
They can be stored in the body, mainly in the liver and fatty tissues.	Most are not stored in large amounts in the body.
They include vitamins A, D, E and K.	They include vitamin B group and vitamin C.
They do not need to be consumed every day in the same way as water-soluble vitamins.	They generally need regular intake through food.

3. Discuss the importance of dietary fibre and water in our diet.

Answer:

Dietary fibre and water are essential for maintaining good health.

Importance of dietary fibre:

1. It helps food move through the digestive system.
2. It prevents constipation.
3. It keeps our digestive system healthy.
4. It helps us feel full for a longer time.
5. Fruits, vegetables, whole grains and pulses are good sources of fibre.

Importance of water:

1. Water helps in digestion.
2. It helps transport nutrients throughout the body.
3. It regulates body temperature.
4. It helps remove waste products through urine and sweat.
5. It prevents dehydration.

Therefore, we should eat fibre-rich foods and drink enough clean water every day.

4. Write a note on deficiency diseases caused by nutrients.

Answer:

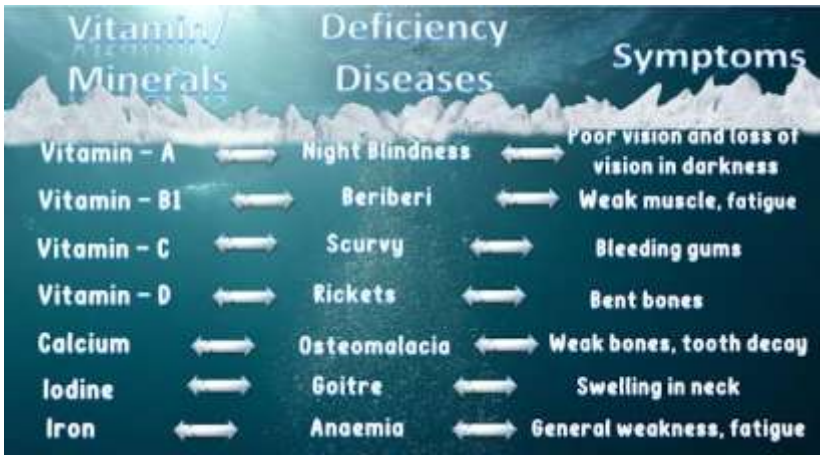

Deficiency diseases are caused when our body does not get enough of a particular nutrient for a long time.

Some common deficiency diseases are:

Disease	Nutrient Deficiency	Main Symptoms

Night blindness	Vitamin A	Difficulty seeing in dim light
Beriberi	Vitamin B1	Weakness and nerve problems
Scurvy	Vitamin C	Swollen and bleeding gums
Rickets	Vitamin D	Weak and soft bones
Anaemia	Iron	Tiredness, weakness and pale skin
Goitre	Iodine	Swelling in the neck

We can prevent many deficiency diseases by eating a balanced diet containing fruits, vegetables, cereals, pulses, milk and other nutritious foods.

5. Discuss the functions of the following minerals.

Answer:

Minerals are important nutrients required by our body in small or large amounts. They help in the proper growth and functioning of the body.

1. Calcium

- It helps build strong bones and teeth.
- It helps muscles work properly.
- It plays an important role in blood clotting.

2. Iron

- It helps in the formation of haemoglobin in the blood.
- Haemoglobin carries oxygen to different parts of the body.
- Iron deficiency can cause anaemia.

3. Sodium and Potassium

- They help maintain the balance of water in the body.
- They help nerves send messages.

- They help muscles work properly.

4. Iodine

- It helps the thyroid gland make thyroid hormones.
- These hormones control growth and metabolism.
- Iodine deficiency can cause goitre.

5. Phosphorus

- It helps build strong bones and teeth.
- It helps the body produce and use energy.
- It is needed for the proper functioning of cells.

6. Fluorine

- Fluoride helps strengthen tooth enamel.
- It protects teeth from tooth decay.
- It is commonly present in drinking water and some foods.

6. How have the culinary practices of India changed over time?

Answer:

The culinary practices of India have changed over time because of changes in lifestyle, technology, travel and food habits.

1. Traditional cooking: Earlier, people mostly cooked food at home using fresh and locally available ingredients.
2. Regional food: Different regions developed their own special dishes using local grains, vegetables, spices and cooking methods.
3. Modern kitchen appliances: Gas stoves, pressure cookers, refrigerators and mixers have made cooking easier and faster.
4. Packaged and processed foods: Ready-to-eat foods, instant noodles, packaged snacks and frozen foods have become more common.
5. Fast food culture: Pizza, burgers and other fast foods have become popular, especially in cities.
6. Health awareness: Many people are now becoming more aware of balanced diets, food labels, fresh foods and healthy cooking methods.

Thus, Indian food habits have changed from mainly traditional home cooking to a mixture of traditional and modern food practices. However, healthy traditional foods such as dal, rice, roti, vegetables, curd and seasonal fruits remain important.

Quick Revision – Important Points

1. Food gives us energy and nutrients.
2. The five main nutrients are carbohydrates, fats, proteins, vitamins and minerals.
3. Carbohydrates and fats are energy-giving nutrients.
4. Proteins are body-building nutrients.
5. Vitamins and minerals are protective nutrients.
6. Starch is a type of carbohydrate.
7. Iodine solution turns blue-black when starch is present.
8. A balanced diet contains all essential nutrients in suitable amounts.
9. Water and dietary fibre are important parts of a healthy diet.
10. Vitamin A helps maintain healthy eyesight.
11. Vitamin C keeps gums healthy and helps wounds heal.
12. Vitamin D helps keep bones strong.
13. Vitamin K helps in blood clotting.
14. Iron deficiency causes anaemia.
15. Iodine deficiency can cause goitre.
16. Calcium and phosphorus help build strong bones and teeth.
17. Eating a variety of nutritious foods helps maintain good health.

Remember: Eat a balanced diet, drink enough clean water, include fruits and vegetables in your meals, and avoid eating too many highly processed foods.
